APPROVAL.

AVOIDING SIDE EFFECTS OF ORAL PAINKILLERS IS NOW EASIER!

**No need to take
Oral painkillers**

**Provides relief
for
6-8 hours**

**Safe for Cardiac and
Diabetic patients**

Advantages of **AH-OsteOint** over other alternatives.

ORAL PAIN KILLERS VS. AH-OSTEOINT

While oral painkillers offer extended relief, continuous use may result in numerous side effects. In contrast, AH-OsteOint provides prolonged pain relief akin to oral medications but without side effects, regardless of the duration of use. Choose AH-OsteOint for effective relief with peace of mind.

DIFFERENCE WITH OTHER PAIN KILLER OINTMENTS AND SPRAYS

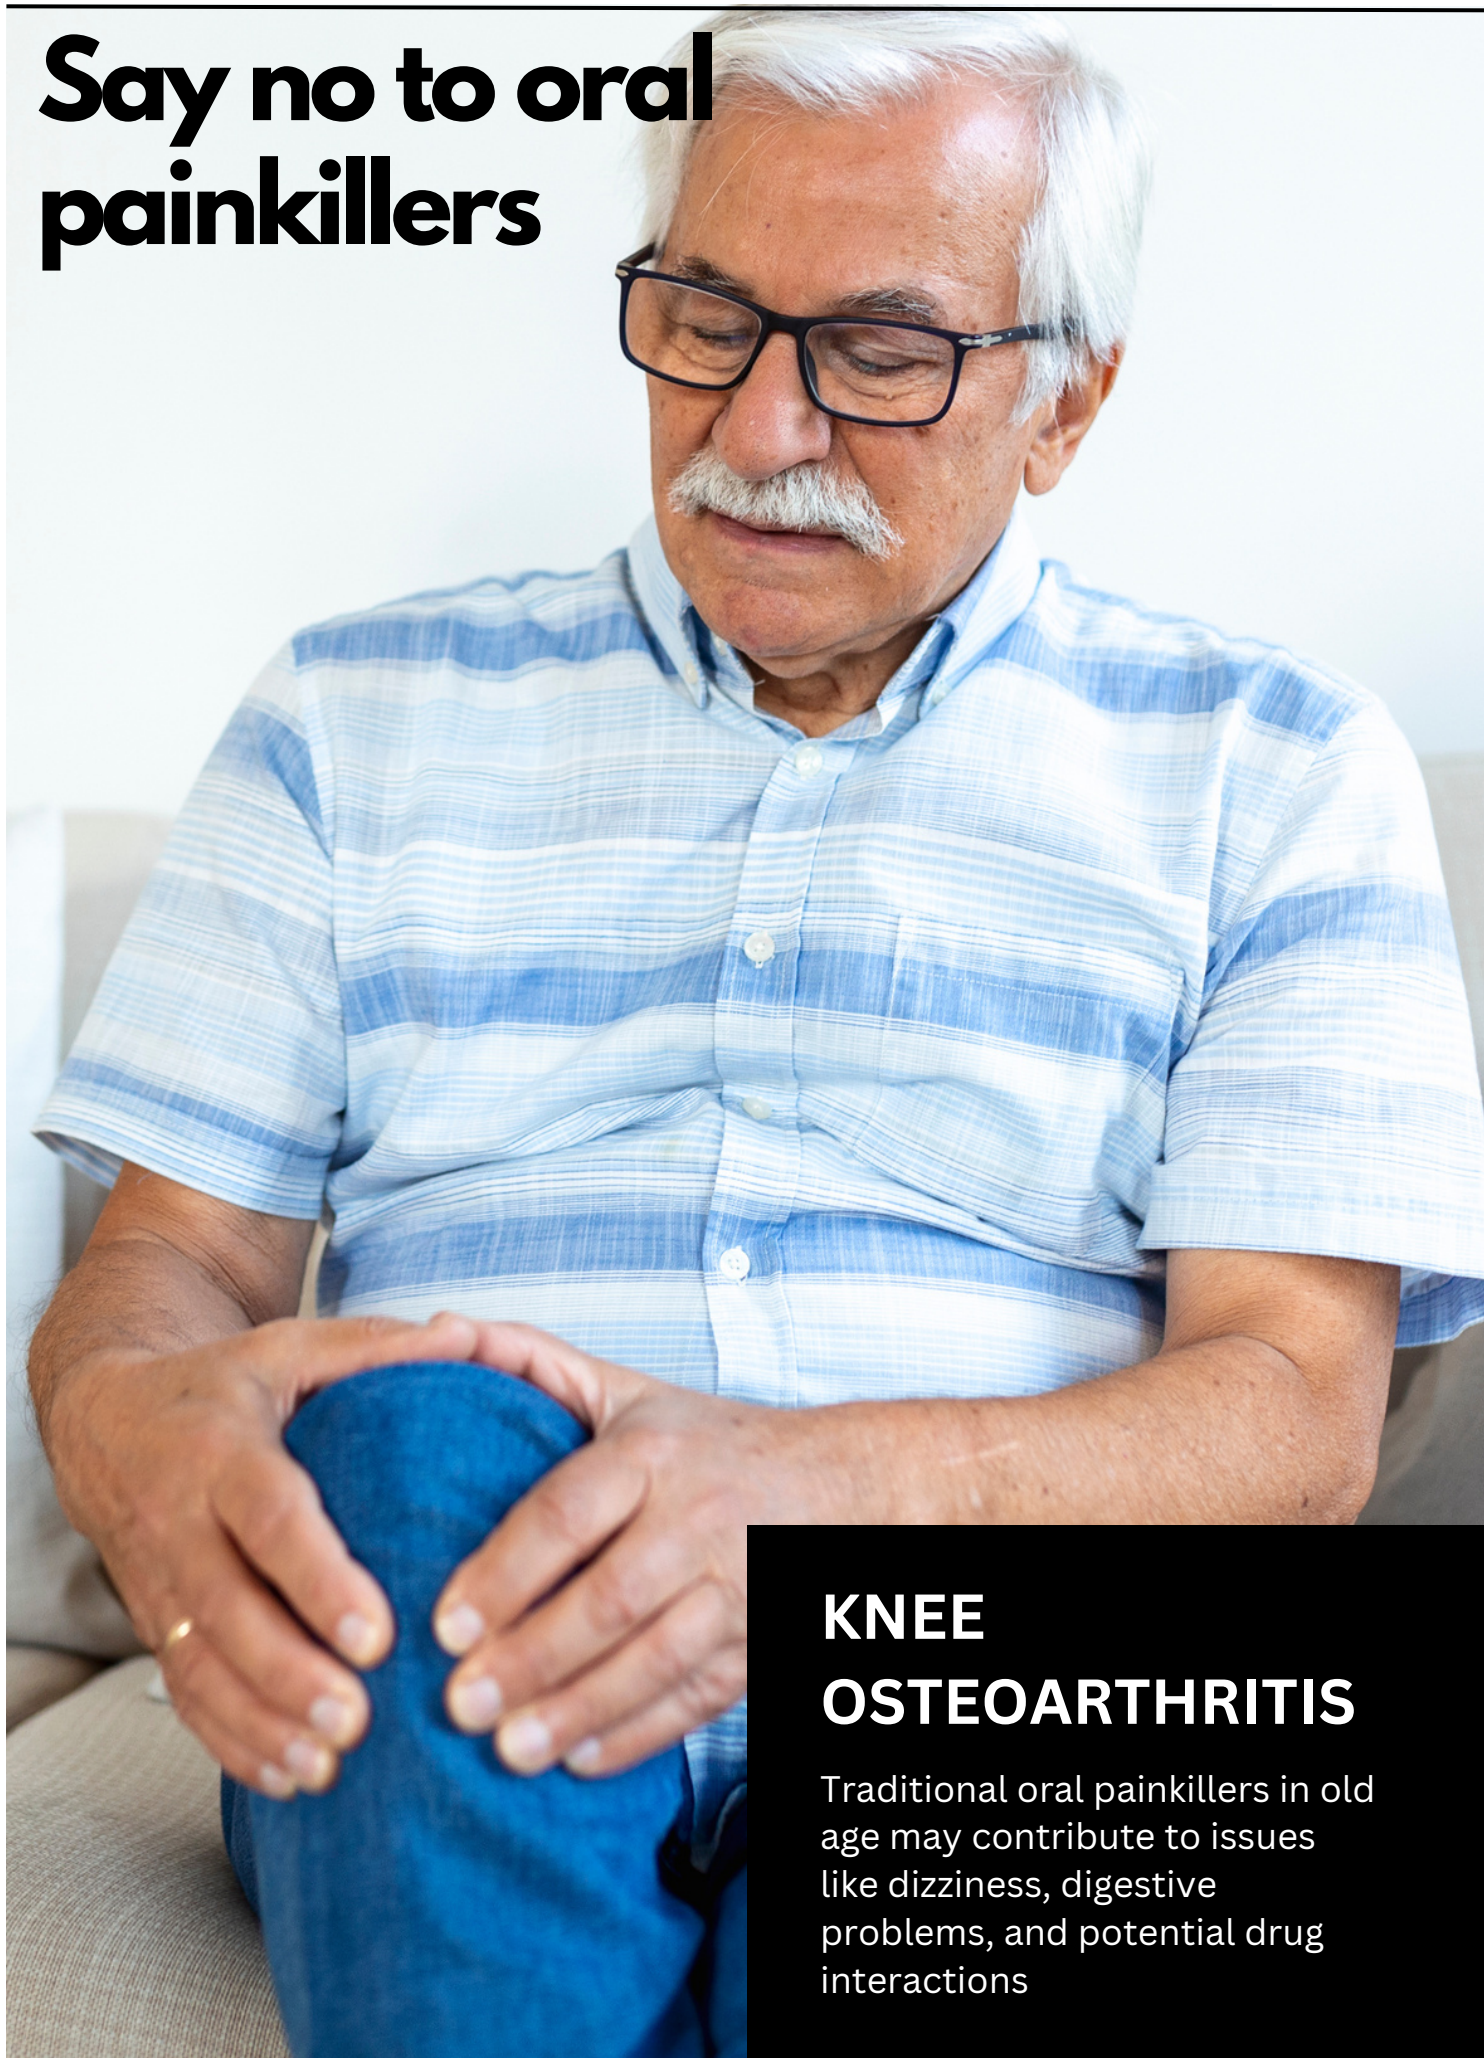

AH-OsteOint delivers enduring pain relief comparable to oral painkillers, eliminating the need for tablets. In contrast, other painkiller ointments or oils provide only short-term relief, necessitating oral medication for long-term comfort. Choose lasting relief with AH-OsteOint.

Say no to oral painkillers

PREGNANT WOMEN

provides side-effect-free, long-term pain relief, prioritizing the well-being of both the mother and child.

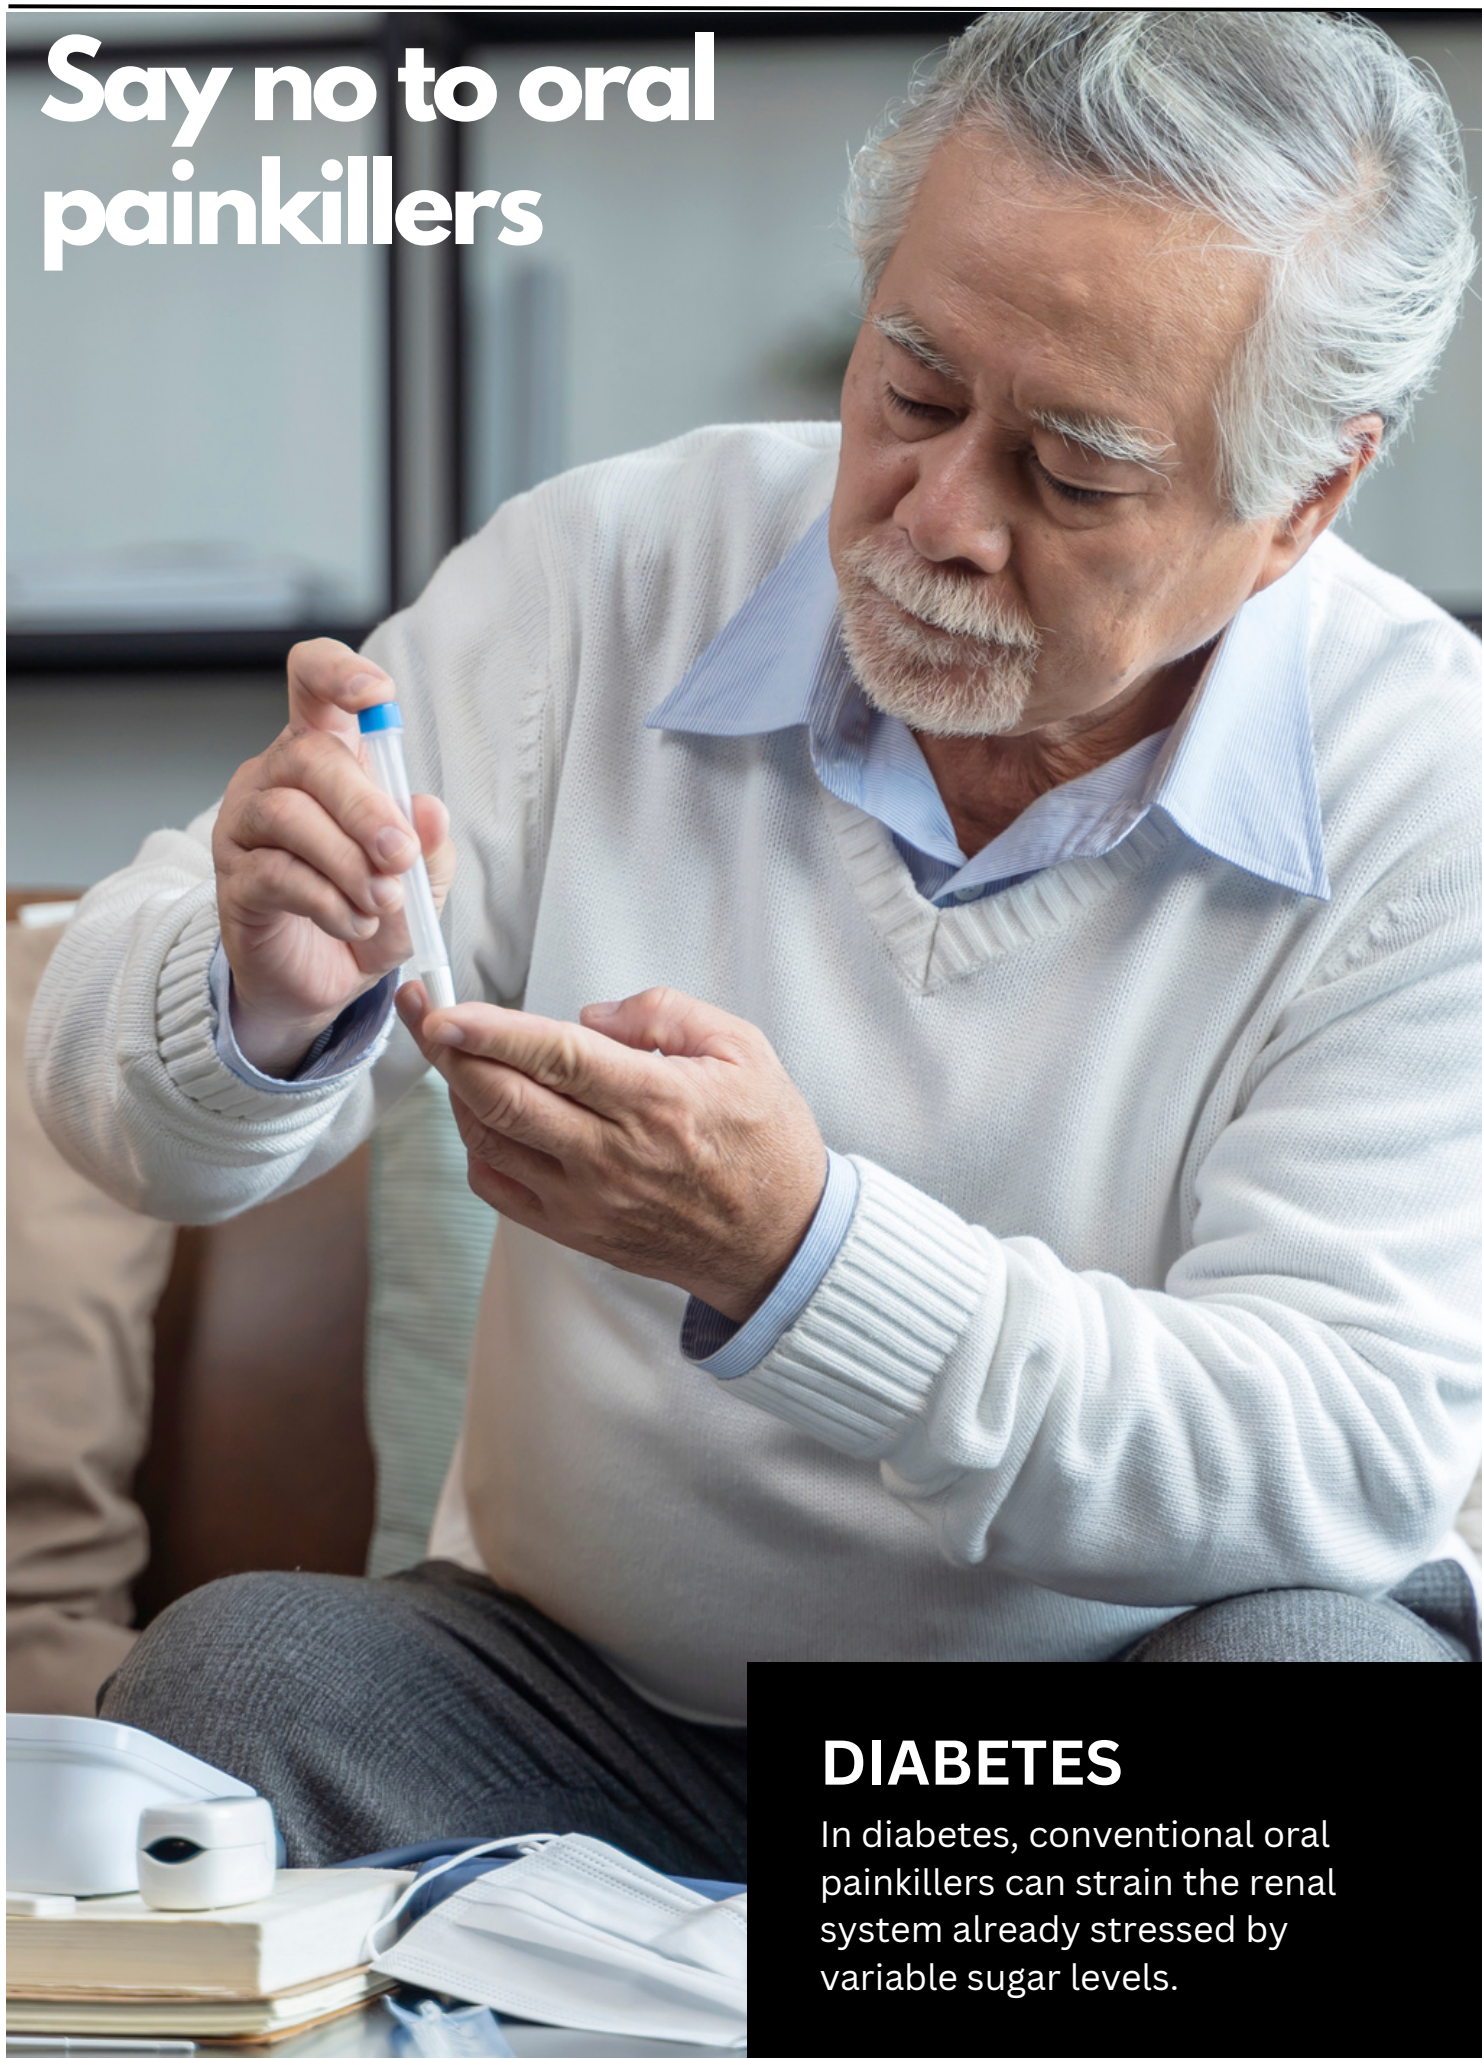

Say no to oral painkillers

KNEE OSTEOARTHRITIS

Traditional oral painkillers in old age may contribute to issues like dizziness, digestive problems, and potential drug interactions

Say no to oral painkillers

DIABETES

In diabetes, conventional oral painkillers can strain the renal system already stressed by variable sugar levels.

Say no to oral painkillers

HEART PATIENTS AND HIGH BLOOD PRESSURE

Steer clear of cardiovascular risks associated with oral painkillers, especially for heart patients, as they may elevate blood pressure.

Say no to oral painkillers

PSYCHOSOMATIC DISCOMFORTS, SHOULDER PAIN

pain relief solution for peri-arthritic shoulder pain and frequent headaches, addressing the shortcomings of conventional painkillers in providing relief for these psychosomatic discomforts.

Say no to oral painkillers

KIDNEY PATIENTS

Traditional oral painkillers pose a risk to kidney health, especially for patients with kidney conditions. We are substituting painkiller tablets without compromising renal well-being.

Say no to oral painkillers

GROWING CHILDREN

Oral painkillers in growing ages may impact bone development and have potential long-term effects by hampering with growth cells.
